ADDRESSING SCHOOLBOARD ITAD NEEDS

BALANCING SECURITY & SUSTAINABILITY

Proper device disposition within your schoolboard can make a significant difference in how efficiently your schools and IT team can protect vital data and increase disposition value.

Effectively managing your data-bearing devices can seem overwhelming and improper ITAD can lead to critical repercussions, including security breaches and costly fines.

Take the guesswork out of your schoolboard's ITAD by following each step of the IT Asset Disposition Mapping process:

1. Identify your schoolboard's unique risks and map out all assets from end-of-life to disposition.
   - Identify the level of security and reporting that is necessary
   - Identify what onsite support is needed
   - Take inventory of all assets
2. Highlight all opportunities where value and security can be optimized and capitalized.
   - Identify requirements, policies and evaluate next steps
3. Ensure guaranteed data security is maintained, maximum value has been achieved and all sustainable processes have been documented.
